

NOTICES

Metacrylics[®] products must be applied and installed according to written specifications from the manufacturer. Metacrylics[®] assumes no liability for failures of this roof/deck system resulting from deviation from manufacturer's written specification, poor workmanship, or delamination of an existing underlying roof/deck membrane. The manufacturer makes no warranty of any kind, express or implied, concerning this roof/deck system, if it is not used according to manufacturer's specifications.

SPECIFICATIONS

DESCRIPTION Metacrylics[™] Acrylic Bleed Blocker Primer is an all-acrylic primer designed for use in a bleed blocker primer to provide resistance to asphalt staining and improve adhesion to the roof substrate. Metacrylics[™] Acrylic Bleed Blocker Primer is ideal for use over asphalt substrates. Asphalt substrates can bleed through acrylic and silicone coatings and Metacrylics[™] Acrylic Bleed Blocker Primer provides a water-based solution to block bleed through.

BENEFITS

- Excellent adhesion when applied over various roofing substrates including aged built-up asphalt, modified bitumen, metal, concrete and others.
- A barrier to ultraviolet light which rapidly degrades the surfaces of asphalt materials
- Significantly lower roof surface temperatures which can help reduce cooling bills.
- Resistance to asphalt staining (bleed through resistance).
- Excellent dirt pick-up resistance.
- Excellent flexibility at temperatures as low as 0...C or 32...F.
- Application by spray, brush, or roller
- 37.5 to 50 g/liter volatile organic components (VOCs).
- User-friendly (soap & water clean-up), environmentally acceptable & ideal for all substrates.

TYPICAL

Appearance	Milky White Liquid
Total Solids by Weight, ASTM D-2369	27.5µ0.5%
pH (as packed)	9.5µ0.3%
Specific Gravity	1.05
Density (lbs/US Gal)	8.76
Tg (DSC)	-10...C, 14...F
Storage Stability	Unchanged at 10 days 60...C
Viscosity (Brookfield)	100-400cps
Storage Precautions	Protect from freezing

DIRECTIONS FOR USE

APPLICATION: Metacrylics[™] Acrylic Bleed Blocker Primer should be applied at a minimum of 4 dry mil thickness (about 1 gallon per square) over unaged asphalt substrates. Depending on the conditions of the existing roof in place, two coats (8 dry mil each) may be necessary for un-aged asphalt substrates. The wet coating will sometimes discolor immediately when applied over aged asphalt surfaces. However, this discoloration which is water soluble will disappear after a few rainfalls.

LIMITATIONS

Metacrylics[™] Acrylic Bleed Blocker Primer should not be applied:

- fi At temperatures below 5...C (or 40...F)
- fi At very high (>90% relative humidity or when rain is expected)
- fi When temperatures can be expected to fall below the dew point within the next 6 hours.

SAFETY

Review the Material Safety Data Sheet (MSDS) and container labels for detailed health and safety information. This product is intended for industrial use by properly trained professional applicators only.
